

# **“Advanced” Arrays**

CPSC 1181 – O.O.

Jeremy Hilliker

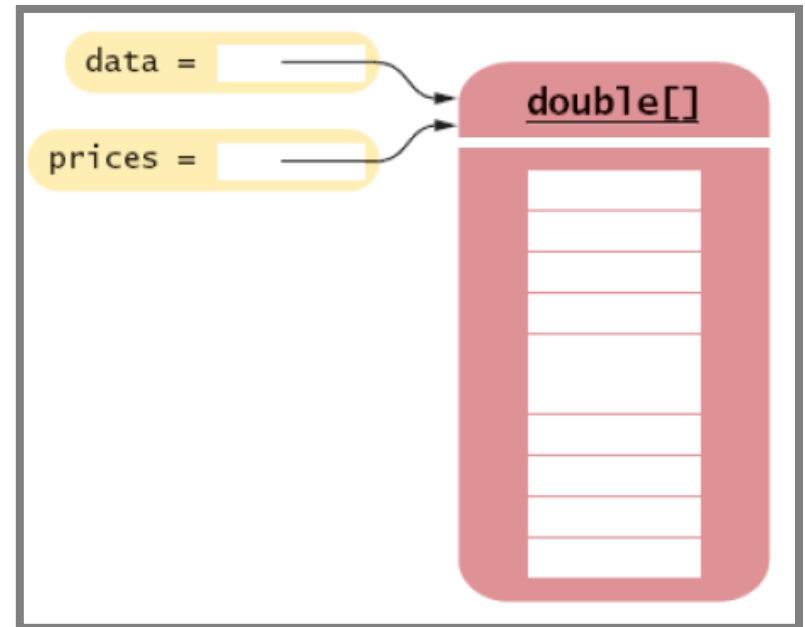

Summer 2017

**Langara.**

THE COLLEGE OF HIGHER LEARNING.

# Copying References

```
4 double[] data = new double[10];  
5 // fill array...  
6 double[] prices = data;  
7 // shallow copy
```

# Cloning

```
4 double[] dest = (double[]) src.clone();  
5 // or  
6 double[] dest = Arrays.copyOf(src, src.length)  
7 // or  
8 double[] dest;  
9 System.arraycopy(src, 0, dest, 0, dest.length);
```

# Growing an Array

1. Create a new, larger array.
  - `double[] newD = new double[2 * data.length];`
2. Copy the contents
  - `System.arraycopy(data, 0, newD, 0, data.length);`
3. Store the reference to the new array
  - `data = newD;`

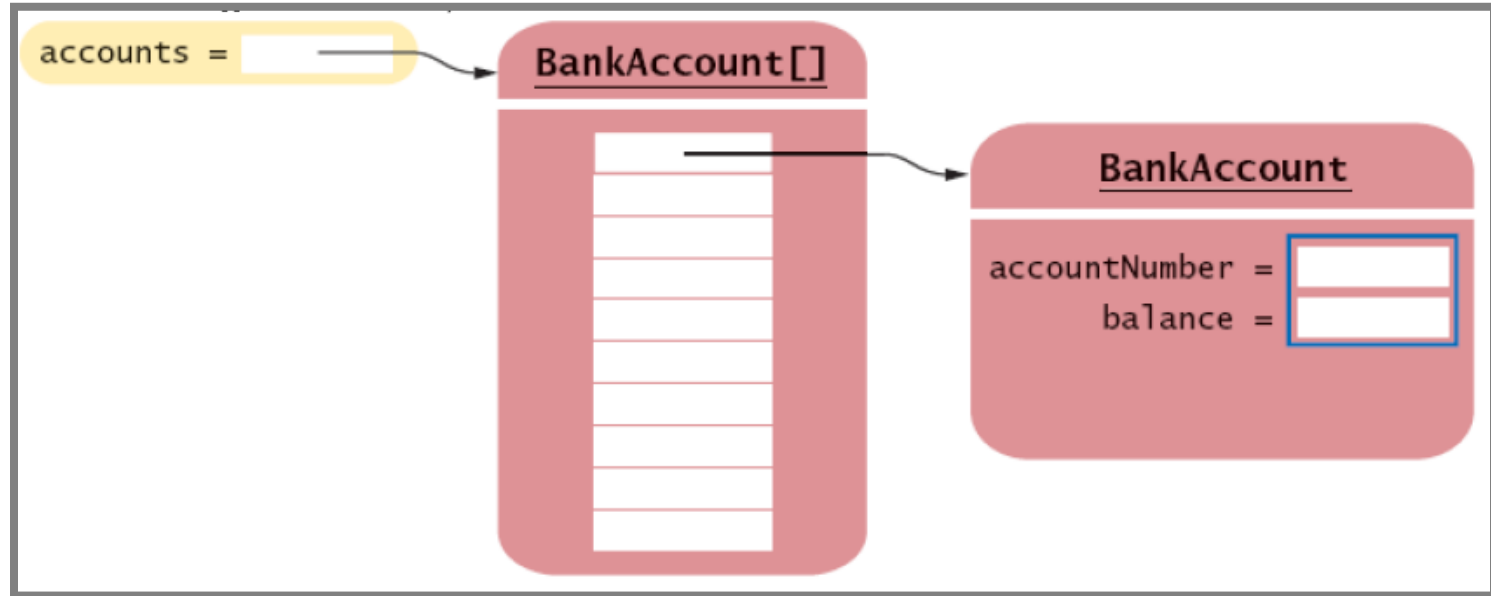

# Parallel Data Structures

- Don't ever do this!

```
int[] accountNumbers = new int[NUM_ACCOUNTS]  
double[] balances = new double[NUM_ACCOUNTS]
```

# Make an Array of Objects

# Partially Filled Arrays
